

111. The perfect union of one leg or arm of
some double monsters very striking

284 - on some ^{double} monsters breeding, opposed to
their sterility is but then it is one
perfect. which breeds. - 377 Lutea generally.

356 Domestic animals, like men, have numerous
varieties in veins

352 monsters occur differently in number &
kind in different species - a trunk sprouting
common in the Pigs. - 355. in wild

(2) animals very few monstrosities - there
is evident relation between monstrosities
varieties

392. organs or part later formed, always must be

(2) affected & causes producing monstrosities.
Early and not - or first formed least
monstrosities - (shows most monstrosities do not
come on very early)

402 on coexistence of monstrosities, without

(9) as evident relation of parts.

406. distinction between arrest of development & (2)
of formation

437 cases of monstrosities in man resembling

(2) Lower animals resulting from persistence
of embryonic condition

448 - intimate parallelism between the embryonic,
zygotical & teratological series.

456 again insists on law of number varying
in part when numerous, & being in itself
variable

456 Summary on laws governing variation -
generally rudiments - (hence cause does not
act very early)

462 on homologous parts uniting both in
monstrosities & in nature. -

do not some account for this & division
of cells at some period of growth ??

479 - on germ being originally monstrosities.

499 arguments for monstrosities being
produced late & 500 Rees, 503 (see

Rey Catalogue). - 506, 7

(641)

347- throws over imagination having any effect
on nature of monitoring.

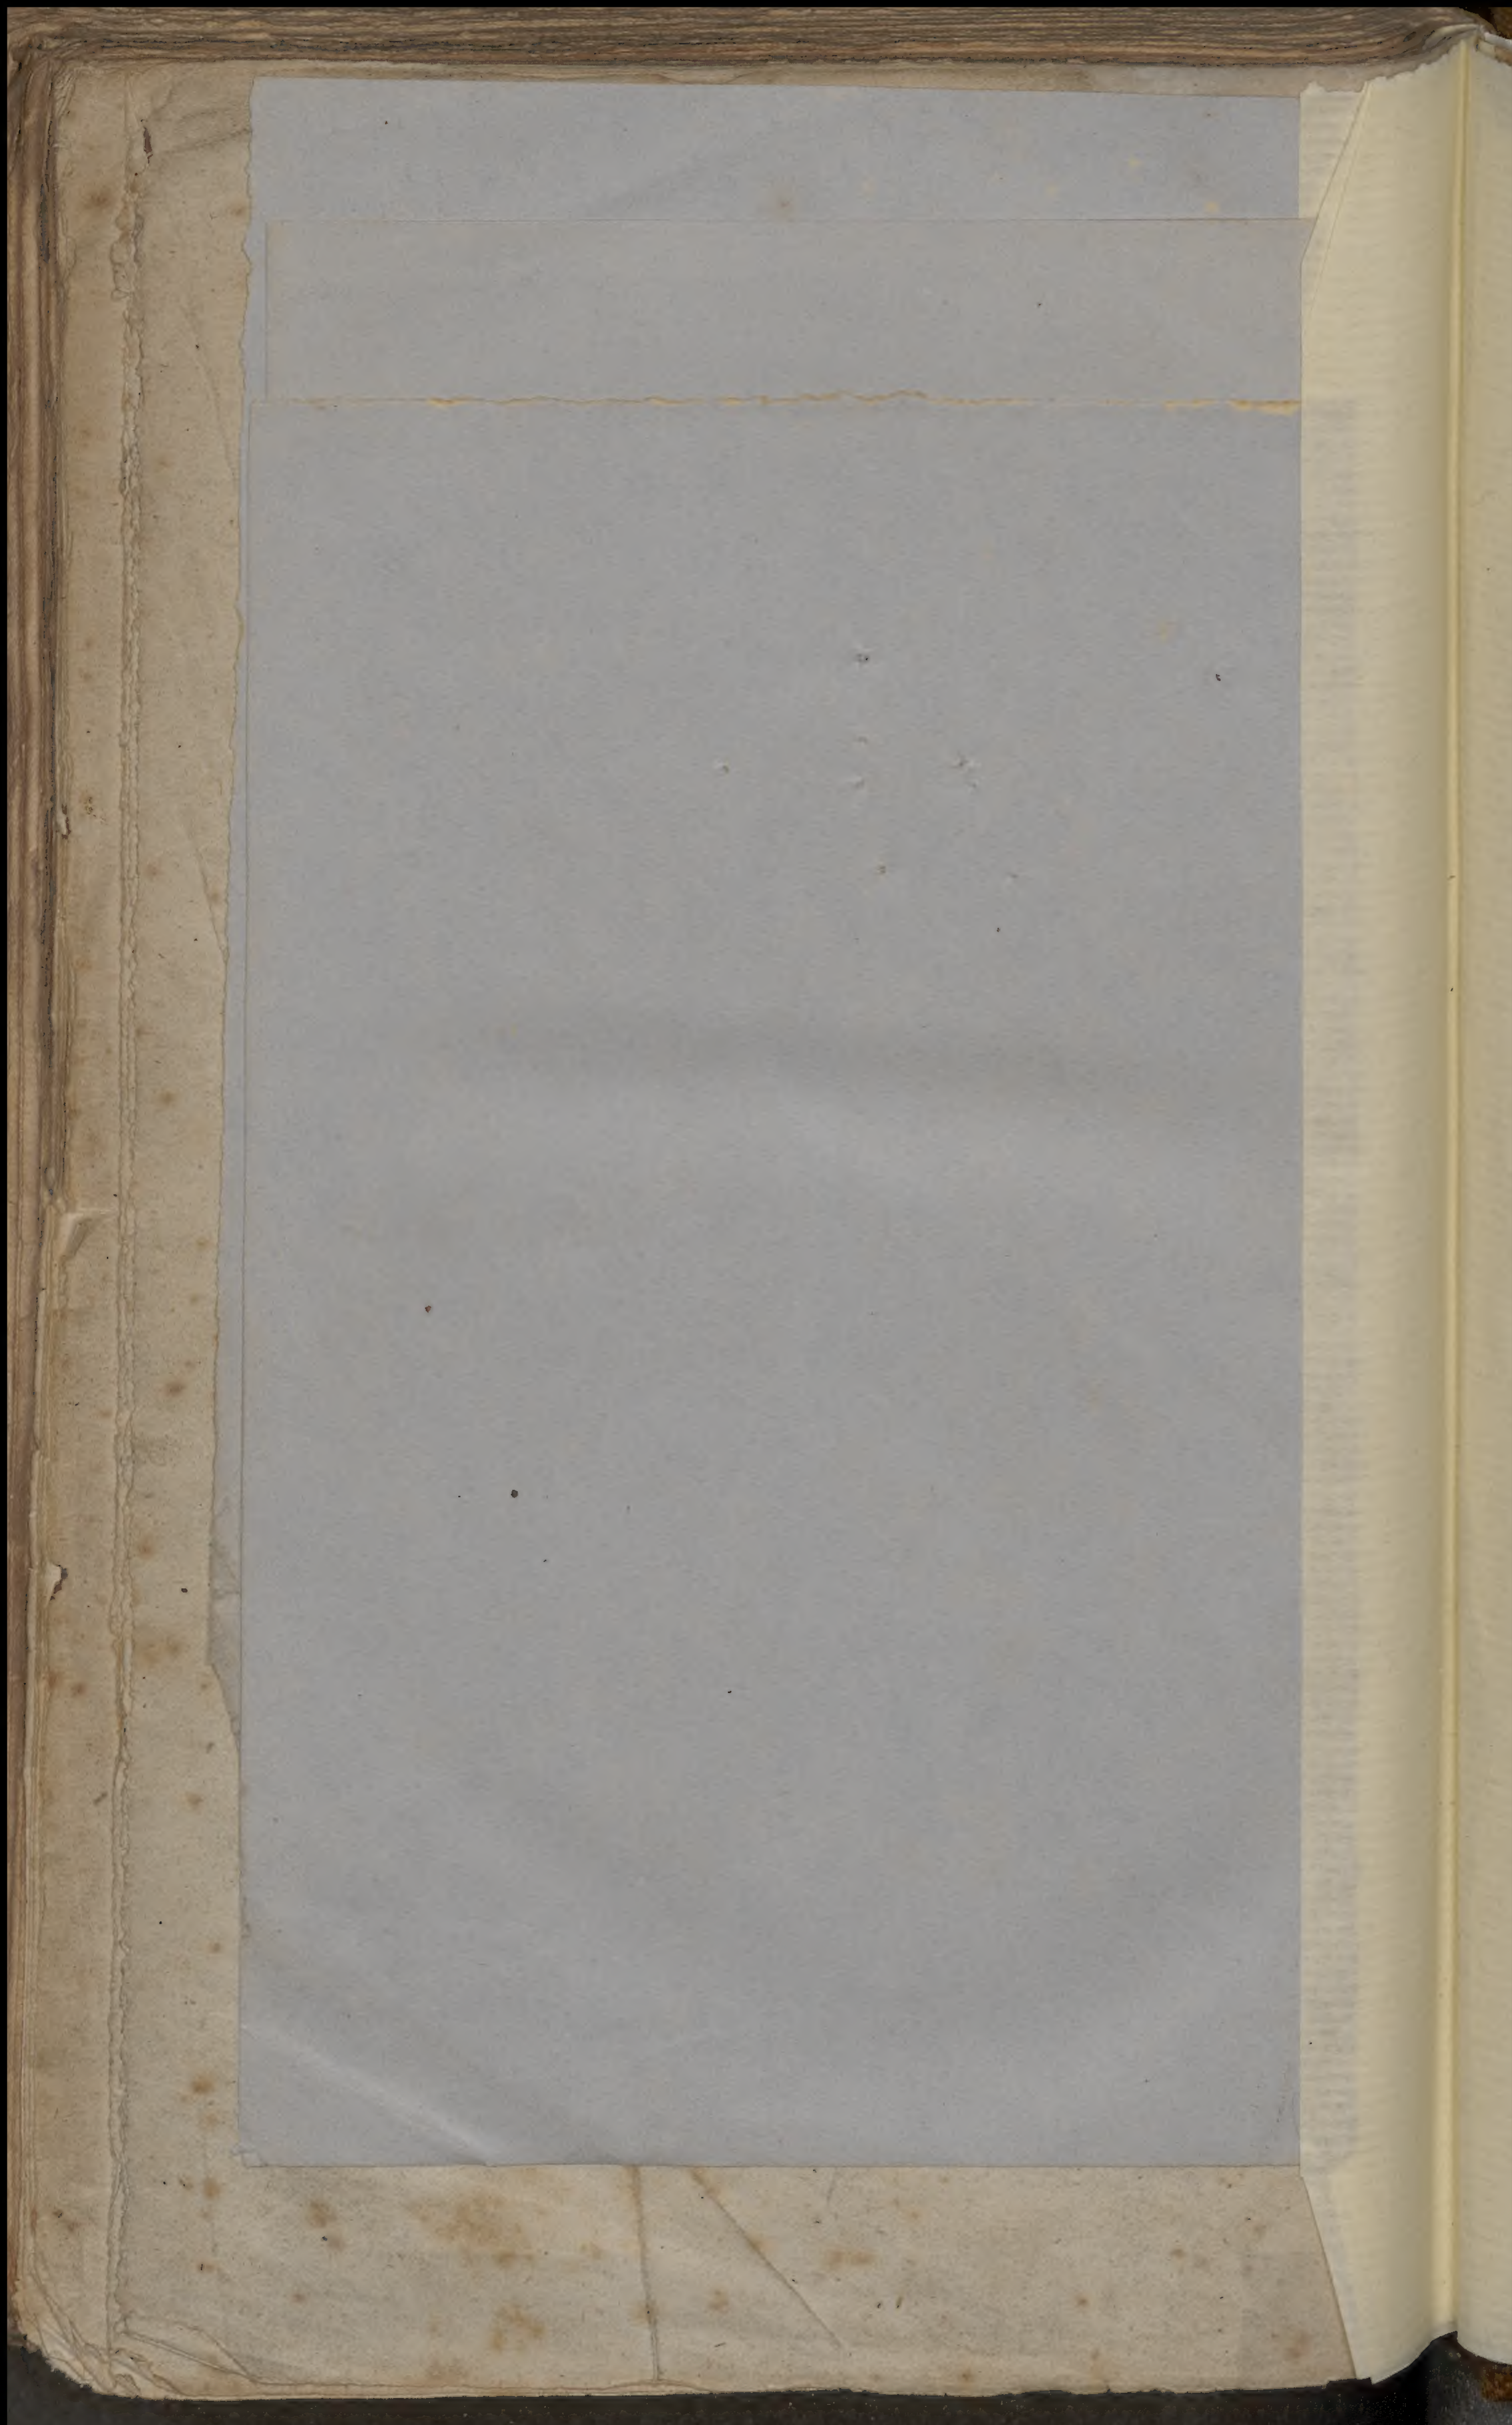

392. (2)

593 - summary of laws of monitoring, nothing
new

604 on parallel series in Zoology

609. good instances, showing how
rarely first cause may be
falsely inverted.
